1 TRANSMISSION EXAMPLES

This document contains examples of transaction requests and responses based on the NCPDP *Telecommunication Standard Implementation Guide*. Each *Telecommunication Standard Examples Guide* is version dependent on the *Telecommunication Standard Implementation Guide*. The specified version of the *Telecommunication Standard Examples Guide* is applicable only to the same version of the *Telecommunication Standard Implementation Guide*.

The NCPDP *Telecommunication Standard Implementation Guide* (Version D and above) allows only variable length transactions. Variable implementation in Version D and above offers the option of truncating or eliminating situational or optional data elements and reducing overall message length.

The Version D and above format contains two Mandatory fixed segments, the "Transaction Header" and "Response Header" segments. These two segments do not use field separators or field identifiers. All other segments use a Field Separator (hex character 1C) to separate each field. Each field has a unique identifier code that, when used in conjunction with the Field Separator, shows the start of a new field in the record (for example, FB refers to Field 511-FB, Reject Code).

All Version D and above examples show field truncation and also omit situational or optional fields when no values are given or required. It is recommended that trading partners be able to send and receive truncated fields and be capable of recognizing when situational or optional fields have been eliminated.

The NCPDP *External Code List* (ECL) values and descriptions are applicable to each specified ECL publication date. Since the NCPDP ECL may be updated on a quarterly basis, more current ECL publications may reflect additions, deletions and/or modifications to those values and descriptions in this document.

1.1 EXAMPLE CONVENTIONS

The examples are shown with mandatory fields followed by situational or optional fields that provide additional information. Situational or optional segments and fields may or may not be transmitted, depending upon situational segment and field rules, and trading partner requirements.

Segments will appear with the Header first (as required).
Transmission level Segments (in any order) appear next.
Transaction level Segments (in any order per Transaction) appear next.

Mandatory fields always appear first and are in the order designated.
Required, situational, and optional fields appear in any order (but must follow the qualifier rule and count or counter rules).

In order to reduce redundancy in the examples and to streamline this guide, not all examples are complete transactions. These examples are marked with a single asterisk (*).

Formatting conventions: In the examples that follow, "bbbb..." denotes blanks and are included to populate required fixed length fields in the header segments.
For errors, the "VALUE" shown in **bold type** emphasizes the data in error.

1.1.1 RAW DATA STREAMS

Some examples show the raw data streams immediately after the charts. An example

F6B112121223232323bb1014563663bbbbbb2018081598765bbbb<1E><1C>AM01<1C>C419620615<1C>C51<1C>CAJOSEPH<1C>CBSMITH<1C>7A123 MAIN STREET<1C>CNMY TOWN<1C>COCO<1C>CP34567<1C>C71<1E><1C>AM04<1C>C2123456789

Not all examples show the raw data streams as there is redundancy in the examples.

1.1.2 CATEGORY (CAT) COLUMN

The CAT (Category) column:

LEGEND:		
Categorization		Explanation
M	Mandatory	Field has been defined as mandatory for the Segment for the Transaction, structural requirements.
R	Required	The situational field has been defined with the situation of "Required" for the Segment for the Transaction.
Q	Qualified Requirement	The situations defined have qualifications for usage ("Required if x", "Not required if y"). In examples, if a requirement is met for the field, the categorization of the field will be "R" (Required).

Version 10

LEGEND:		
Categorization		Explanation
		For example, if Basis of Reimbursement Determination (522-FM) has a situation of "Required if Ingredient Cost Paid (506-F6) is greater than zero (0)" and the Ingredient Cost Paid in the example is greater than 0, the categorization will be "R". Or a qualifier is dependent upon the qualified field. With the presence of the qualified field in the example, the qualifier becomes required. Or a count and a qualifier are dependent upon the qualified field. With the presence of the qualified field in the example, the count and the qualifier become required. Not all business cases can be represented, so where fields are categorized as "Q", if they are present in the example, it is assumed they meet the business requirements to satisfy the situation(s).
O	Optional	Field has been defined as optional usage (situations were not defined).
I	Informational	The situational usage for the field is for informational purposes only.

In this example, the patient has requested the Brand Product (Dispense As Written (DAW)/Product Selection Code = 2). This request will result in the processor adding the cost difference between the preferred and brand products to the Patient Pay Amount. Using the above fields, the processor provides information about the preferred alternative if customer wishes to change their mind.

1.10 COMPOUNDED RX BILLING - TRANSACTION CODE B1 (01)

Billing for Product with DUR.

For this example, the first occurrence of the Compound Ingredient Drug Cost (449-EE) is intentionally missing. This correlates to the rejected response example that shows a “M/I Compound Ingredient Drug Cost” occurrence 1.

For the Captured/Paid response, assume the \$1.20 was actually submitted in the Compound Ingredient Drug Cost (449-EE) first occurrence.

1.30 SERVICE BILLING – TRANSACTION CODE S1 WITH CPT CODES

Examples of Service Billing transactions without a medication.

1.30.1 SCENARIO USING CPT CODES

Mary Simmons is a 77 year-old female who lives at home and takes seven medications on a regular basis, with doses administered at four different times throughout the day. Her four major diagnoses are diabetes, arthritis, angina and osteoporosis. Because of the complexity of her regimen, she frequently misses doses of her medication. Her daughter is especially concerned and asks the physician for assistance. The patient's physician refers Ms. Simmons to a geriatric pharmacist for evaluation and assistance.

The pharmacist sees the patient and daughter in his private office. The office visit was 45 minutes in length, with 30 minutes face-to-face. He reviews the drug regimen and recommends changes to the prescriber to simplify the regimen. He also prepares a schedule and instructions for the patient to follow to assist adherence to the regimen, and arranges for the medications to be provided in special packaging to enhance compliance.

In this example, CPT4 codes are used. In order to bill the additional 15 minutes of face-to-face consultation, another transaction must be submitted using the CPT4 code of *0117T*.

1.30.2 SCENARIO USING CPT CODES WITH DUR/PPS SEGMENT

Pearl Johnson is an 83 year-old female who is moving in to an assisted living community. During the initial assessment by the nurse, Ms. Johnson reports that she has experienced several falls in recent weeks. Fortunately, serious injury has not yet resulted. Because she takes nine regularly scheduled medications, Ms. Johnson's physician refers her to a geriatric pharmacist for a consultation.

The pharmacist interviews the patient face to face at the assisted living facility for 15 minutes and reviews the drug regimen for medications that may increase the risk of falls. The pharmacist makes recommendations to the prescriber for medication changes to decrease the risk of falls, and suggests that the patient change one of her medications to bedtime instead of morning administration.

This example uses CPT codes with the DUR/PPS Segment.

1.35 ELIGIBILITY MEDICARE PART D TO FACILITATOR USING LAST KNOWN 4Rx

Date of Request: 10/01/2018

Date of Service: 10/01/2018

Beneficiary coverage unknown for current date of service (10/01/2018).

The pharmacy does not have Social Security Number or MBI information on file (or the values submitted do not produce a match on the Transaction Facilitator files). Pharmacy does have the beneficiary's Medicare Part D coverage information for last paid claim with date of service 06/01/2018. In this situation, the Cardholder ID (302-C2) would be submitted as "LASTKNOWN" and the beneficiary's last known Medicare Part D Cardholder ID (123556698) would be submitted in Last Known Cardholder ID (B59-3H).

The inclusion of the Last Known 4Rx Segment is used by the Transaction Facilitator to locate the beneficiary MBI.

Once the MBI is found, then the Date of Service is used to find the 4Rx for coverage that is active during the date of service.

Response: Approved

1.36 ELIGIBILITY MEDICARE PART D TO FACILITATOR USING LAST KNOWN 4Rx

Found Member But No Coverage

Date of Request: 10/01/2018

Date of Service: 10/01/2018

Beneficiary coverage unknown for current date of service (10/01/2018).

The pharmacy does not have Social Security Number or MBI information on file (or the values submitted do not produce a match on the Transaction Facilitator files). Pharmacy does have the beneficiary's Medicare Part D coverage information for last paid claim with date of service 06/01/2018. In this situation, the Cardholder ID (302-C2) would be submitted as "LASTKNOWN" and the beneficiary's last known Medicare Part D Cardholder ID (123556698) would be submitted in Last Known Cardholder ID (B59-3H).

The inclusion of the Last Known 4Rx Segment is used by the Transaction Facilitator to locate the beneficiary MBI.

Once the MBI is found, then the Date of Service is used to find the 4Rx for coverage that is active during the date of service.

Response: Rejected Response- does not meet criteria of having current or future Part D coverage

1.41 COORDINATION OF BENEFITS WHEN MULTIPLE OTHER PAYERS EXIST

This example shows how the Other Payer-Patient Responsibility Amount fields repeat when the Coordination of Benefits/Other Payments Count (337-4C) is greater than 1 (there are multiple other payers). In this example, there are 3 payers (primary, secondary, tertiary). The secondary payer requires Other Payer Amount Paid (OPAP) values and the tertiary payer requires Other Payer-Patient Responsibility Amounts (OPPRA) to determine reimbursement.

TOTAL AMOUNT PAID represents a sum of “Ingredient Cost Paid” (506-F6), “Dispensing Fee Paid” (507-F7), “Regulatory Fee Amount Paid” (558-AW), “Percentage Tax Amount Paid” (559-AX), “Incentive Amount Paid” (521-FL), “Professional Service Fee Paid” (562-J1), “Other Amount Paid” (565-J4) less “Patient Pay Amount” (505-F5) and “Other Payer Amount Recognized” (566-J5).

In above example, the secondary payer’s contracted rate is less than that of the primary (\$19.50 vs. \$20.00). A \$10.00 copay and the agreement to pay \$9.50 is returned.

1.41.3 BILLING REQUEST TO TERTIARY INSURANCE – COORDINATION OF BENEFITS METHOD 2: OTHER PAYER-PATIENT RESPONSIBILITY AMOUNT (OPPRA) WITH PATIENT PAY AMOUNT ONLY (OPPRA QUALIFIER OF 6) FROM ALL PREVIOUS PAYERS

In this Coordination of Benefits/Other Payments Segment, there are two loops of other payer information (primary, secondary). Note that the Other Payer Coverage Type (338-5C) and its associated fields do not have to appear in ascending order (primary first, then secondary). The Other Payer Coverage Type (338-5C) and its associated fields could occur as secondary payer information first, then primary payer information, or primary first, then secondary, as long as the associated fields remain together in the loop. (See other Coordination of Benefits examples.) In this example to illustrate this point, the secondary payer fields loop occurs first, to illustrate the Other Payer-Patient Responsibility Amount (352-NQ) associated with the **highest** Other Payer Coverage Type (338-5C) within a non-rejected occurrence to determine the patient’s liability prior to applying their benefits.
