Document Name: Medicare Part D Nx Transaction Overview		
APPROVAL AUTHORITY: DIRECTOR OF COMPLIANCE, GOVERNMENT PROGRAMS		

1. Introduction

This document provides an overview of the Company's Medicare Part D Nx Transaction Processing.

2. Definitions

See Global Glossary / Acronyms

3. Background

The Information Reporting (Nx) Transaction provides Part D plans with a record of the patient pay amount after pharmacy bills a supplemental (other) payer. This amount is used by the Part D plan to calculate the supplemental plan paid amount to be attributed to Patient Liability Reduction Other (PLRO) or Other True Out Of Pocket (TrOOP) and reduce the members final cost share.

There are three types of Nx Transactions:

- Information Reporting (N1)
This transaction is used to submit Other Payer TrOOP amounts to the primary processor.
- Information Reporting Reversal (N2)
 - This transaction is used to reverse a previously submitted Information Reporting transaction. It is requesting the Processor or Reporting Entity to back out the previously reported Other Payer information.
- Information Reporting Rebill (N3)
This transaction is an information reporting submission with an implied reversal. It is used by the Originator to cancel a previously processed information reporting transaction, and submit a new information reporting transaction at the same time and in the same transaction.

Note: All Nx transactions from the Centers for Medicare and Medicaid Services (CMS) Part D Transaction Facilitator will have a CMS transaction reference number included in the Point-of-Sale (POS) data. The CMS transaction reference number is used to associate unique Other Payer information together when Nx transactions are

resubmitted and/or reversed. If more than one Other Payer pays on a B1 claim, each Other Payer's Nx transactions will have their own unique CMS transaction reference number.

The CMS Part D Transaction Facilitator is Relay Health.

3.1. N1 processing

3.1.1. Receipt of N1

Pharmacy claims (Bx transactions) are submitted to Other Payers by the pharmacy through the CMS Part D Transaction Facilitator. The Bx transactions that are not rejected by the Other Payer and are flagged as supplemental to Part D are used by the CMS Part D Transaction Facilitator to trigger the creation of an Information Reporting Transaction (Nx). The CMS Part D Transaction Facilitator sends the Nx transaction to the Part D plan in real-time to enable accurate TrOOP reporting.

3.1.2. N1 Other Payer Data

When creating the Nx Transaction, the CMS Part D Transaction Facilitator will include the following Other Payer (Supplemental) 4Rx data with the Nx transaction to assist in identifying the other payer.

- Nx Other Payer Bank Identification Number (BIN)
- Nx Other Payer Process Control Number (PCN)
- Nx Other Payer Cardholder ID
- Nx Other Payer Group ID (if available)

The Other Payer information is used by the Part D plan to determine if the Other Payer is a qualified or non-qualified Other Payer.

3.1.3. Validation of an Nx match to a Bx claim

When an N1 transaction is received by the Company, verification is done to determine if there is a valid Bx claim that matches to the incoming Nx transaction.

Just as in other transaction types, the BIN and PCN received on the Nx transaction is used to locate the customer number, to be used in the search for a matching Bx claim.

If the customer number found using the Other Payer BIN/PCN from the N1 transaction does not have an Alternate Business flag value of Q (MA-PD) or R (PDP), the N1 transaction will be rejected with National Council for Prescription Drug Programs (NCPDP) reject code 607 (see appendix A for definition). An N1 claim record will not be created.

The Nx transaction to Bx claim matching logic searches for all paid, denied and reversed POS Bx claims where the following fields match between the Nx transaction and Bx claims:

- Service Provider ID (Pharmacy ID in the form of NCPDP or NPI)
- Date of Service
- Rx/Service Reference Number
- Product/Service ID (NDC)
- Cardholder ID: searches primary or Alternate ID based on customer eligibility set up
- Fill Number

If no Bx claims are found that match to the Nx transaction, the Nx transaction is rejected with NCPDP reject code 607 (see Appendix A). An N1 claim record is not created.

If paid, denied and/or reversed Bx claims are found that match to the Nx transaction, the matching logic will match to the paid Bx claim.

- If a paid B1 claim with Benefit Stage Qualifier value(s) of 1-4 is found that match to the Nx transaction, the search ends. A paid N1 claim is created and associated to the matching paid B1 claim.
- If a paid B1 claim with Benefit Stage Qualifier value(s) not equal to 1-4 is found that match to the Nx transaction, the search ends. A denied N1 claim is created, with NCPDP reject code 611 (see appendix A) and associated to the matching paid B1 claim.

If only denied/reversed B1 claims are found that match to the Nx transaction, the search ends. An N1 claim is created, denied with NCPDP reject code 610 and associated to the matching denied/reversed B1 claim.

If only a paid B1 claim with Benefit Stage Qualifier value(s) of 1-4 is found that match to the Nx transaction, the search ends. A paid N1 claim is created and associated to the matching paid B1 claim.

If only a paid B1 claim with Benefit Stage Qualifier value(s) not equal to 1-4 is found that match to the Nx transaction, the search ends. A denied N1 claim is created, with NCPDP reject code 611 (see appendix A) and associated to the matching paid B1 claim.

Note: Electronic Claim Transmissions (ECT), Paper and Direct Member Reimbursement (DMR) claims are not searched for matches to the N1 transaction.

3.1.4. Creating the N1 claim:

When a B1 claim match to an Nx transaction is found, a N1 claim record is created. The following fields from the matching B1 claim will be copied to the corresponding fields on the newly created N1 claim it is matched to.

- Member Data:
 - Customer ID

- Client ID
- Group ID
- Member ID
- Member Start and End Dates
- Gender
- Date of Birth
- Case ID
- Alternate Member ID
- HICN Number
- Medicare Beneficiary ID
- Misc Data 1, 2 and 3
- Contract ID
- PBP ID
- Alternate Business Flag
- NDC Data:
 - Generic Indicator (GI)
 - Generic Price Indicator (GPI)
 - GCN
 - Generic, Standard and Specific Therapeutic Class
 - AHFC Code
 - Drug Class
 - Manufacturer
 - Drug Name
 - Dosage Strength
 - Orange Book Indicator
 - NDC Maintenance Indicator
 - ANDA
 - DEA Code
 - Drug Category

3.1.5. Nx claim association to Bx

In the event a valid B1 claim match is found, the B1 claim and N1 claim are linked to each other to create an association between the two claims.

The associated claim reference (ACR) information on the N1 claim will contain the associated B1 claim information. The same applies for the B1 claim as it will contain the associated N1 claim information.

The following information can be found on the associated N1 and B1 claims under the Associated Claim Reference (ACR) radio button in IPNS Claim and “Nx Other Payer” view in RxNova Claim:

- Other Associated Claim ID
- Other Associated Claim ID Type
 - **2** = association between original B1 Claim and associated Nx claims.
 - **5** = association between B1 claim and associated Nx refund
 - **6** = association between Nx Refund and associated Nx claim

- **11** = association between original Nx and associated adjusted, cloned, reversed and refunded Nx claims.
- **9** = association between two or more duplicate Nx claims.
- **10** = association between Reversed/Denied B1 claim and associated denied Nx claim.
- Other Associated CUST ID

Note: A Bx claim can have multiple associated Nx claims and Nx refunds from one or more supplemental payers. Nx claims and Nx refunds for the same supplemental payer will be associated to each other and to the Bx claim.

	5 - Orig B1 For Refund	0000			
	2 - Nx	0000			

3.1.6. N1 Duplicate Verification

If the incoming N1 transaction matches to a paid B1 claim, the logic performs an exact Nx duplicate check to ensure the incoming N1 transaction has not already been received and paid. The duplicate check includes the above mentioned 6 fields plus Other Payer information and copay matching. The additional matching fields for Nx to Nx are:

- Transaction Reference Number
- Customer Number
- Client Number
- Group Number
- Other Payer BIN
- Other Payer PCN
- Patient Pay Amount Submitted

If the incoming N1 transaction is determined to be an exact duplicate of a previously accepted and paid N1 claim, the following will occur:

- A new N1 claim is created from the incoming N1 transaction and marked as a duplicate with error code 023.
- The new N1 claim will be linked to the existing paid N1 claim to reflect an association between the two N1 claims.
- An accepted response for the new N1 transaction is returned to the CMS Transaction Facilitator.

Exact Duplicate except Copay:

If the incoming N1 transaction is a duplicate of a previously paid N1 claim except for the N1 copay amount, this indicates the Other Payer has made an adjustment to their plan paid amount and resubmitted the N1 transaction. When this occurs the Company will:

- Reverse the previously paid N1 claim.
- Add an internal reversal error code 239 to the reversed N1 claim
- Create a new N1 claim with the new submitted N1 copay

Claim Type	Patient Paid Amount (Copay)	Other Payer BIN	Other Payer PCN	Other Cardholder ID	TrOOP Applied	PLRO	Other Troop	Claim status	CIC status
B1	40				60			11	PAY
N1	10	12453	225000	123456789		10		63/73	REV
N1	15	12453	225000	123456789		15		62/72	PAY

3.1.7. Qualified vs Non-Qualified Paid N1 claims

When a paid N1 claim is matched to a paid Part D B1 claim with a covered Part D drug, the Other Health Insurance (OHI) BIN and OHI PCN submitted on the N1 claim is used to determine if the Other Payer is a qualified or non-qualified payer.

The Company offers three OHI options for determining the qualified / non-qualified status of the Other Payer. Each option can be used singularly or in any combination with the others.

Option 1: The OHI BIN and OHI PCN submitted on the N1 claim is compared to the member's eligibility record secondary, tertiary and quaducary OHI data.

- If an OHI match is found and the fill date on the N1 claim is within the date range of the matching OHI on the member record, the Rx Type Code on the member's eligibility OHI record is read.
 - If the value is "Q" (qualified SPAP), "R" (Charity) or "S" (Aids Drug Assistance Program "ADAP"), the Other Payer submitted on the N1 claim is considered qualified.
 - If the value is not "Q", "R" or "S", the Other Payer submitted on the N1 claim is considered non-qualified.
- If an OHI match is not found, the Other Payer submitted on the N1 claim is considered non-qualified.

Option 2: The OHI BIN and OHI PCN submitted on the N1 claim is compared to OHI BIN and OHI PCN records in a pre-defined customer OHI table. If an OHI match is found and the fill date on the N1 claim is within the date range of the matching OHI record, the Other Payer submitted on the N1 claim is considered qualified.

Option 3: The OHI BIN and OHI PCN submitted on the N1 claim is compared to the OHI BIN and OHI PCN records in a pre-defined global company OHI table. If an OHI match is found and the N1 fill date is within the date range of the matching OHI record, the Other Payer submitted on the N1 claim is considered qualified.

Qualified "TrOOP Eligible" Other Payer:

If the Other Payer (OHI) submitted on the N1 claim is identified as Qualified, the following will apply:

- The TrOOP Eligible Flag on the N1 claim will be set to a value of “Y”
- The difference between the B1 patient pay amount and the N1 copay will be populated in the Other TrOOP Amount and Other Payer Paid Amount fields on the N1 claim.
 - In the event the N1 copay is greater than the B1 patient pay amount (resulting in a negative difference), populate the Other TrOOP Amount and Other Payer Paid Amount fields on the N1 with \$0.00 and add soft error 258 to the N1 claim.
- The Deductible Status 2 Indicator and message are not populated on the N1 claim.
- Member Ded Appld amount is not populated on the N1 claim.
- The N1 claim is not written to the deductible / accumulator system.

Non-Qualified “Non-TrOOP Eligible” Other Payer:

If the Other Payer (OHI) submitted on the N1 claim is identified as Non-Qualified, the following will apply:

- The TrOOP Eligible Flag on the N1 claim will be set to a value of “N”
- The difference between the B1 patient pay amount and the N1 copay will be populated in the Patient Liability Reduction Due (PLRO) and Other Payer Paid Amount fields on the N1 claim.
 - In the event the N1 copay is greater than the B1 patient pay amount (resulting in a negative difference), populate the PLRO, Other Payer Paid Amount and TrOOP Applied Amount with \$0.00 and add soft error 258 to the N1 claim.
- Reduce the member’s TrOOP (TrOOP Applied Amount) dollars by the same amount populated in the Other Payer Paid Amount field on the N1 claim.
- If the Other Payer Paid Amount (OPPA) is greater than \$0.00, write the N1 claim to the deductible / accumulator system.
 - Apply the OPPA dollars to the same phase as the B1 claim.
 - Populate the Deductible Status 2 indicator and message on the N1 claim.
 - Populate the Member Ded Appld amount on the N1 claim.
 - Set error 220 to soft on the N1 claim if the submitted OHI (BIN/PCN) could not be matched to an OHI record on file.

Note: The submitted N1 copay is populated in the UCF (submitted) copay field on the N1 claim record.

3.1.8. Orphan N1 Transactions

Orphan N1 transactions are N1 transactions that no longer have an active matching paid B1 claim. The B1 claim has been changed from a paid claim status (10 or 11) to a non-paid claims status (70 or 71).

In order to reconcile Other TrOOP, PLRO, and/or Gross Drug Spend for a member that has a B1 claim reversed or adjusted to deny and the associated paid N1 transaction is not reversed or adjusted to deny, a monthly automated process is done to reverse the N1 transactions internally.

Reversals of the orphan paid N1 claims apply the internal reversal error code 239 (Reversed by the Company).

3.2. N2 – Reversal

3.2.1. Receipt of N2 Reversal

When the pharmacy reverses a B1 claim, a B2 reversal transaction is sent to the CMS Part D Transaction Facilitator. The CMS Part D Transaction Facilitator uses the following six fields to match the B2 reversal to prior N1 transactions.

- Service Provider ID
- Date of Service
- Rx/Service Reference Number
- Product/Service ID (NDC)
- Cardholder ID
- Fill Number

If prior N1 transactions are found, the CMS Part D Transaction Facilitator creates and sends the N2 reversal transaction to the Part D sponsor. The N2 reversal transaction will include the following fields from the prior N1 transaction being reversed:

- Benefit Identification Number (BIN)
- Process Control Number (PCN)
- Cardholder ID
- Group ID (if available)
- Transaction Reference Number

3.2.2. Matching an N2 reversal transaction to a N1 claim

When the N2 transaction is received by the Company, verification is done to determine if there is a valid paid N1 claim to reverse.

N2 matching logic will use the Transaction Reference Number as the first match when searching for a paid N1 claim to reverse.

If a paid N1 claim is not found, a secondary match is performed using the following fields from the N2 transaction to find the paid N1 claim (claim status 72 - Finalized Accepted N1 Transaction).

- Rx/Service Reference Number
- Service Provider ID (Pharmacy ID)
- Date of Service
- Fill Number
- Other Payer BIN
- Other Payer PCN

If the incoming N2 reversal transaction matches to a non-paid N1 claim (63/73 rejected / denied / reversed claim status), the logic will search for a matching paid B1 claim (using the same field criteria used to match an N1 transaction to a B1 claim). If a paid B1 claim is found that matches to the N2 reversal transaction the following error is returned on the N2 reversal:

NCPDP reject code 769: Medicare Part D Paid Claim Found (B1/B3), but Information Reporting Reversal (N2) Cannot be Matched to an Information Reporting (N1/N3) Transaction in Approved Status; Reversal Not Processed.

If a matching paid B1 claim is not found, NCPDP reject code 770 is returned.

NCPDP reject code 770: Medicare Part D Paid Claim (B1/B2) Not Found and Information Reporting Reversal (N2) cannot be Matched to an Information Reporting Transaction (N1/N3) in Approved Status: Reversal (N2) Not Processed.

If a paid N1 claim is matched to the incoming N2 reversal transaction, the N1 claim will be reversed.

- The claim status on the N1 claim will be updated to 63 (unfinalized rejected / denied / reversed)
- The CICS status on the N1 claim will be updated to Reversed (REV).
- Error code 074 – Claim denied at Pharmacy request – POS reversal will be applied to the N1 claim.
- All dollars applied to Other TrOOP Amount and PLRO will be backed out/removed.
- All dollars deducted from TrOOP Applied Amount during the initial processing of the paid N1 claim will be added back to TrOOP.

3.3. N3 Rebill

3.3.1. Receipt of N3 Request

Pharmacies may submit a B3 rebill transaction to reverse a previously processed B1 claim and submit a new claim in the same transaction. The CMS Part D

Transaction Facilitator captures the B3 transaction and uses the following six fields to match the B3 rebill transaction to prior N1 transactions.

- Service Provider ID
- Date of Service
- Rx/Service Reference Number
- Product/Service ID (NDC)
- Cardholder ID
- Fill Number

If prior N1 transactions are found, the CMS Part D Transaction Facilitator creates and sends the N3 rebill transaction to the Part D sponsor. The N3 rebill transaction will include the following fields from the prior N1 transaction being rebilled (reversed and resubmitted):

- Benefit Identification Number (BIN)

- Process Control Number (PCN)
- Cardholder ID
- Group ID (if available)
- Transaction Reference Number

3.3.2. Validation of N3 Rebill

Verification by the Company is performed to determine if the incoming N3 rebill transaction matches to an existing paid N1 claim.

N3 matching logic will use the Transaction Reference Number as the first match when searching for a paid N1 claim to rebill.

A secondary match is performed using the following fields from the N3 rebill transaction when a paid N1 (claim status 72 - Finalized Accepted N1 Transaction) claim is not found:

- Rx/Service Reference Number
- Service Provider ID (Pharmacy ID)
- Date of Service
- Fill Number
- Other Payer BIN
- Other Payer PCN

The Company will perform the following when a matching paid N1 claim is found:

- Reverse the previously paid N1 claim:
 - Update the claim status to 63 (unfinalized rejected / denied / reversed)
 - Update the CICS status to REV
 - Add error code 074 – Claim denied at Pharmacy request – POS reversal
 - All dollars applied to Other TrOOP Amount and PLRO will be backed out/removed from deductible/accumulator
 - All dollars deducted from TrOOP Applied Amount during the initial processing of the paid N1 claim will be added back to TrOOP (deductible / accumulator).
- Create new N1 claim and following processing rules identified in section 1 of this document.

The Company will reject the N3 rebill transaction if a matching paid N1 claim is not found. NCPDP reject codes 85 – Claim Not Processed and reject code 87 – Reversal Not Processed will be returned in the N3 rebill response transaction.

3.4. Indian Health Services Nx Transactions

CMS guidance requires plan sponsors have the ability to process Nx transactions submitted by an Indian Health Services (IHS) pharmacy.

Prior to 11/17/2022, IHS Nx transactions differed from other Nx transactions in that a nightly batch process was utilized to update the matching paid B1 IHS claim. The

nightly batch process updated the Other TrOOP Amount on the paid B1 IHS claim with the amount in the submitted copay field on the Nx transaction. The TrOOP amount in deductible/accumulator was also increased by the same Nx submitted copay amount. An enhancement to IHS Nx was introduced with the 2022 November Release. This enhancement eliminated the nightly batch process, and associated IHS Bx claims with their corresponding Nx claims in real-time. This is similar to processing of non-IHS Nx claims processing.

Note: Refer to the Medicare Part D Indian Health Services Overview document for detail.

3.5. Adjustment / Refund Processes

CMS requires Plans to refund other payers when claims are adjusted/reworked that result in a change to member liability where another plan has paid for a portion of that liability. The Company developed the Nx Refund process to facilitate this requirement.

To execute Nx member rework the rework default parameter “Perform Nx processing” should be set to “yes” at a customer level.

Note: all Part D customers are required to have this flag set to “Yes” for all rework requests.

Nx member adjustments are submitted in the exact same fashion as non-Nx submissions by submitting the paid B1 claim that requires adjustment. When Nx processing default is set to “yes” Rework will identify any associated Nx claim from the submitted B1 claim that need to be re-adjudicated. There is no additional work necessary to submit an Nx adjustment.

When reworking B1 claims that have an associated paid Nx claim and there is a reduction in copayment on the B1, a refund is due to the other payer that paid on behalf of the member. These refund claims are produced to facilitate the Nx other payer refund.

The Nx refund claims (status 66, 76) are created to update the other troop for qualified payers and PLRO for non-qualified payers.

The Nx refund claims also direct financial processing on how much refund is due to the other payer.

The Payable File:

- The Payable file is the only output unique to Nx adjustments. Nx special financial processing is consistent with non-Nx special financials with the addition of “The Payable File”.
- “The Payable File” will contain the claim level Other Payer and/or member reimbursements that results from the Nx adjustment.

- The Payable file will identify a supplemental payer as the refund payee by the other payer BIN and other payer PCN on the Nx transaction.
- All member reimbursements can be funded just as any other Special financial and the Company will distribute member refund checks.
- Plans are responsible for issuing other payer refund payments indicated in the payable file.

3.6. Downstream Reporting

- The PDE system reports the N1 (72), which includes rolling the N1 data with the B1 data and reporting the appropriate “Other TrOOP” and “PLRO” amounts on the PDE.
- The Payment Claims Transmission (PCT) reports the N1 (72) “Other TrOOP Amount” or “PLRO” fields on the PCT.
- The Explanation of Benefits (EOB) system reports the N1 (72) and populates the amount paid by the other payer with the note “Other Payer”. The member’s Year-to-Date (YTD) totals are updated for both the print and data feed customers.
- During Financials the claim status will change from 62 (Unfinalized Accepted N1 Transaction) to 72 (Finalized Accepted N1 Transaction) when the claim is finalized and is used in downstream reporting.

N1,N3	611	Information Reporting Transaction (N1/N3) Was Matched To A Claim Submitted Under The Part D BIN/PCN Paid As Enhanced Or OTC Or By A Benefit Other Than Part D	449	SUPP CLM MATCHED TO CLM COVERED BY NON PART D
N2	769	Medicare Part D Paid Claim Found (B1/B3), But Information Reporting Reversal (N2) Cannot Be Matched To An Information Reporting (N1/N3) Transaction in Approved Status; Reversal Not Processed	N/A	N/A
N2	770	Medicare Part D Paid Claim (B1/B3) Not Found And Information Reporting Reversal (N2) Cannot Be Matched To An Information Reporting Transaction (N1/N3) in Approved Status; Reversal (N2) Not Processed	N/A	N/A

Appendix B:

Nx Claim Status Types

Unfinalized Nx Transactions

- 62 - Unfinalized Accepted N1 Transaction
- 63 - Unfinalized Rejected/Denied/Reversed N1 Transaction

- 66 - Unfinalized Other Payer Refunded N1 Transaction
- 67 - Unfinalized Other Payer Refund Reversal N1 Transaction

Note: Prior to being finalized, unfinalized claims have an active indicator equal to “A” (assigned by claims processing), which is defined as “Claim is active and ready to be processed through a financial cycle”

Finalized Nx Transactions

Financials changes the claim status initial number from 6 to 7 indicating a finalized transaction.

- 72 = Finalized Accepted N1 Transaction
- 73 = Finalized Rejected/Denied/Reversed N1 transaction
- 76 = Finalized Other Payer Refunded N1 transaction
- 77 = Finalized Other Payer Refund Reversal N1 Transaction

Note: Financials read the claim table for Nx transactions with an active indicator of “A” and removes this indicator by replacing it with a “blank”, which is defined as “Claim not active, (indicating it has already gone through a financial cycle and is finalized)”.

Appendix C:

Nx CICS Status codes.

- CICS status code indicates the status of a claim.
- DNI: Deny Due to Errors
- PAY: Paid
- REV: POS Reversal
- APY: Other Payer Paid Adjusted Nx Claim
- ARV Other Payer Reversal Nx Claim
- REF: Other Payer Paid Nx Refund Claim
- ARF: Other Payer Paid Adjusted Refund Nx Claim
